

EVV Manager

Collect critical service documentation and comply with federal requirements.

What is EVV Manager?

Utilizing information from Vertex Case Manager, EVV Manager's expanded functionality enables it to record all services, helping simplify the work agencies do while having access to accurate information. Additionally, GPS coordinates can pinpoint when an agency caregiver arrives at and leaves a location.

EVV Manager is available to download from the Apple App Store and Google Play. Our home care management software pinpoints, stores, and reports the DSP's location at the start and finish of a session. Session notes can be entered, signed, and collected all before the session is marked as complete. A completed session is automatically transmitted to the Vertex Case Manager database, and automatically uploaded to your State's aggregator.

The EVV record captures service times, notes, and signatures, and logs GPS coordinates.

It's the same record used for billing and eliminates 100% of redundant data entry.

How EVV Manager Can Benefit You:

- Uses GPS coordinates to pinpoint arrival and departure
- Tracks feedback of service
- Ensures accurate and complete reporting
- Ensures accurate billing
