

Production Manager

Grow profitably and discover areas for major savings

What is Production Manager?

Give your team visibility of their daily performance with job costing and profitability reported by job (contract), product, and customer, no matter where they are. Direct service providers and production supervisors can stop duplicating manual entries of the same data—and making mistakes in attempting duplicate entries—in multiple disconnected systems.

This solution is designed to assist rehab agencies that deliver prime and subcontract assembly and manufacturing services. Your agency has the same need to run production profitably as the private sector, so invest in the same tools to maximize revenue from your prime and subcontract operations.

Customers using Vertex Production have reported that they've increased their profits by 5% or more while decreasing staff time spent on paperwork

Benefits of Production Manager

- Know if a job is underperforming in real time
- Track jobs, steps and time studies
- Create sales and purchase-related documents
- Follow order fulfillment and invoices
